OFURO BATH (med) 1300 L x 800 W x 750 H (Base 1300 x 800) Wt 250kg / Cap 260 L

WASTE | 40mm plug and waste with no overflow with long shaft (usually 80mm) Supplied by client. The plug and waste must be onsite on the day of installation.

PLUMBING | Where possible, we recommend the use of a “smartpan” with “smartseal” to allow flexibility when positioning the bath. The client, unless otherwise arranged is to supply the plug and waste. A plumber must be onsite on the day of installation.

FLOOR | Floor to be engineered for 1000 kg. The floor on which the bath will sit must be flat and level.

TILES | Tiles under the bath must be flat and level. Any protruding corners or edges must be ground back to flat under proposed bath position. If bath is against or close to a wall, all tiling must be completed.

CONCRETE SLAB | No plumbing can be proud of a concrete slab. The floor must be flat and level (no fall) where bath is to be positioned. If using a low profile “plumb dinger”, rubber sealing donut must not protrude above floor level more than 2mm.

TIMBER FLOOR | Floor must be supported across bottom of floor to avoid movement. If there is access under the floor, a 100mm hole is required. If there is no access, then plumbing must be secured ensuring PVC pipe is secure and square to the floor.

Please contact us well before installation or at the appropriate stage in the build to discuss installation of our baths where necessary.
